Electronic Health Records
Improving Efficiency and Quality

Ideas To Implement

Clinician Efficiency Tips: Interactions with Patients

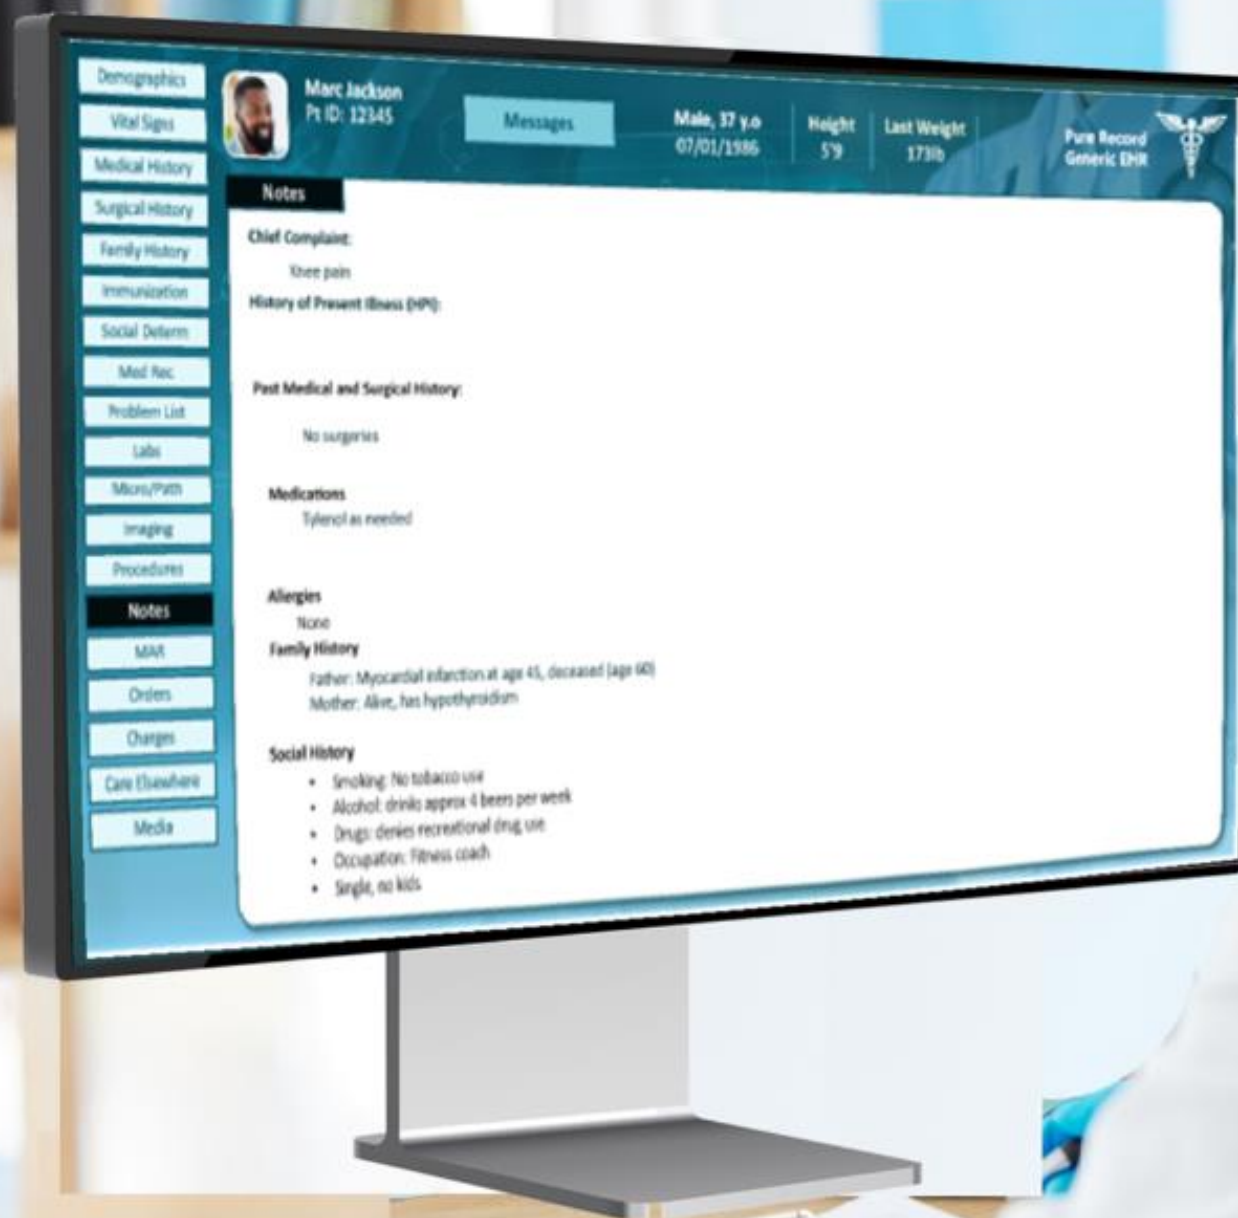

When we get your results back, if everything is ok, you will NOT hear from me. If you have questions, please contact us. No news is good news.

If you have a straight forward questions, contact us on the patient portal. We will respond on the portal within 'x' days and during office hours. If it needs discussion, we'll contact you about booking an appointment.

So to recap, [xyz]....
and can i just confirm, you don't need any medication refills?

Raise these topics at the end of an appointment to improve efficiency

Clinician Efficiency Tips: Using the EHR

Finish notes asap that day, try **voice dictation**

Avoid note bloat, only document pertinent ROS and physical exam

Learn shortcuts (e.g. dot phrases)

Avoid complicated messaging with patients
Request appts or charge for online interactions

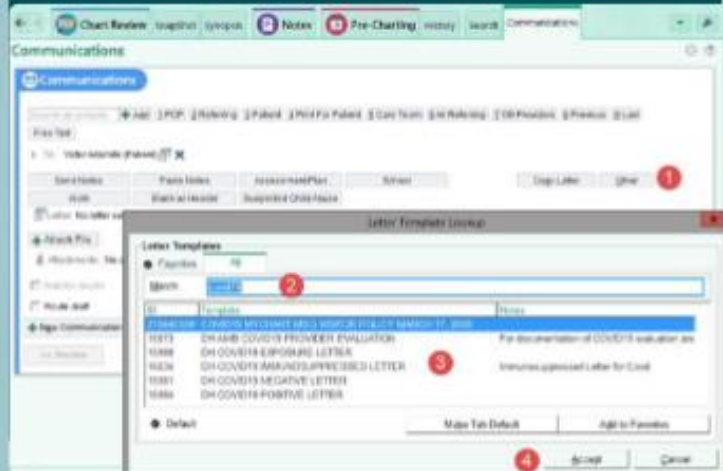

Consider approving **longer prescriptions** for routine medicines

Explore, learn online, use resources available

Clinician Efficiency Tips: Schedule Improvements

Each week schedule 15 minutes to improve your EHR use

Adjust templates

Make shortcuts for common orders, instructions, and processes

= + **ENTR** 2x brings up last patient's chart

Learn a new trick and share skills with colleagues

Immediate Changes to Improve Quality Metrics

1

Let the EHR work for you not the other way around

- Learn how each quality metric is satisfied and keep up with changes
- Use shortcuts and reminders

2

Keep the chart "clean"

- Delete resolved or redundant problems
- Document historical data and diagnoses accurately the first time – makes the next visit faster

3

Address quality metrics at physicals (& other appts, if time)

- We all need regular reminders!

4

Remember, for Medicare patients, each years starts with 0

- Add and address each visit to get credit for how complex your patients are

Office Efficiency Tips

Request information in advance

Mature the information

Focus the patient

Agree **who** asks the patient **what** and **when**

Map your process and simplify

Process Map To Create Efficiencies
